INTERNAL · JORDAN, JULIAN AND SHAUN

Growing our three Atlassian clients

For each of our three Atlassian clients, you will find who they compete with, their best selling apps, what we have done and what we can do next. Every page points at the two goals the clients gave us: more evaluations and more revenue.

- **ij-solutions · Epic Clone for Jira**
- **SolDevelo · QAlity Plus for Jira**
- **codefortynine · Deep Clone for Jira**

Read it with Julian's research deck, "Is Atlassian growing, and what happens next?" (2 November 2026). Marketplace numbers on these pages come from the public Marketplace data on 7 November 2026.

SUMMARY

Five things to know before the call

The page numbers after each point show where to find the detail. The dark box lists the three outcomes we want from the call.

1. **All three accounts bring fewer trials than at their best, and we see only part of them.**
   Atlassian's cookie banner hides many trials from Google Ads and GA4. We cannot prove evaluations until each client sends its monthly Marketplace evaluation report. **Page 5**

2. **Revenue is our blind spot.**
   No client has told us how many trials turn into paying customers or what an install is worth, so our reports stop at clicks. The playbook needs these numbers from day one. **Pages 3 and 17**

3. **Each focus app has one edge we can sell.**
   Epic Clone copies a full epic into another project and runs on Forge. QAlity Plus costs about a fifth of Xray. Deep Clone leads its category with 11,432 installs and clones up to 100,000 work items at once. **Pages 6, 9 and 12**

4. **The cheapest new revenue sits with users the clients already have.**
   SolDevelo has 2,916 installs of its free QAlity app, and codefortynine has 11,432 Deep Clone installs to cross-sell into. ij-solutions splits its buyers between two cloning apps. **Pages 7, 10 and 13**

5. **Two of the three ad budgets are uncertain.**
   ij-solutions stops ad spend in mid-December, and SolDevelo has not yet decided on our growth plan. Work beyond ads, such as listings, reviews and upgrades, gives these clients a reason to stay. **Page 4**

Leave the call with

- A playbook draft we all agree on
- An owner for each of the eight open questions
- A decision on which services beyond ads we sell to Atlassian vendors

THE BASICS

An Atlassian app makes money when a Jira team tries it, pays for it and keeps paying

Steps 1 to 3 bring evaluations, and steps 4 and 5 bring revenue. Use these steps when you talk about either goal on the call.

1

A Jira team searches

They search on Google, inside the Marketplace or in AI tools, or they see our ad.

→

2

They land on the listing

The vendor's website cannot sell a cloud app, so every path ends on the Marketplace listing.

→

3

They start an evaluation

A Jira admin clicks Try. Anyone else clicks Request, which asks their admin to install it.

→

4

The trial ends and they pay

The price follows the total number of users on the Jira site, including people who never open the app.

→

5

They renew and add apps

Renewals, bigger teams and a second app from the same vendor all add revenue.

Goal 1 · More evaluations
Our ads, pages and listing work move steps 1 to 3.

Goal 2 · More revenue
Site size, upgrades and cross-sells drive steps 4 and 5, and the vendor controls most of them.

Bigger Jira sites pay far more

Deep Clone costs $665 a year for 50 users and $6,910 for 1,000 users. One large customer is worth ten small ones, so targeting larger companies is a revenue lever.

Ad platforms count clicks on Try

Google Ads and GA4 count clicks on Try, Request and Install. The vendor's Marketplace report shows which of those clicks became real evaluations.

A cookie banner hides most ad visitors

Since 12 June 2026, Atlassian's banner hides visitors in regulated regions such as Europe who decline cookies. In October, GA4 saw 24 of the 195 people who clicked ij-solutions' ads.

OUR THREE CLIENTS

We run Google Ads for all three, and each one bought extra work on top

Two of the three sell cloning apps. Epic Clone and Deep Clone compete for the same Jira teams and bid on the same searches.

	ij-solutions	SolDevelo	codefortynine
App we promote	Epic Clone for Jira	QAlity Plus	Deep Clone for Jira
Job it does	Copies an epic with all its stories and sub-tasks into another project	Runs and tracks software tests inside Jira	Bulk clones work items, epics and whole projects, and moves them between Jira sites
Category	Cloning	Test management	Cloning and migration
Work we do	Google Ads, demo page advice, blog plans, listing and product page advice	Google Ads, a pillar page, a solution page, landing page plans	Google Ads, technical SEO by Julian, tracking guides
With us since	April 2026 (our first report covers 30 April)	29 June 2026	August 2026
Ad budget from November	€700 a month (Search €300, Demand Gen €400)	3,000 zł a month, if SolDevelo approves the plan	€3,500 a month (Search €3,100, Demand Gen €400)
Watch out for	ij-solutions stops all ad spend in mid-December	SolDevelo is deciding internally whether to go ahead with our growth plan	brighttail (Matthew) owns the website and listing. We do ads and technical site work

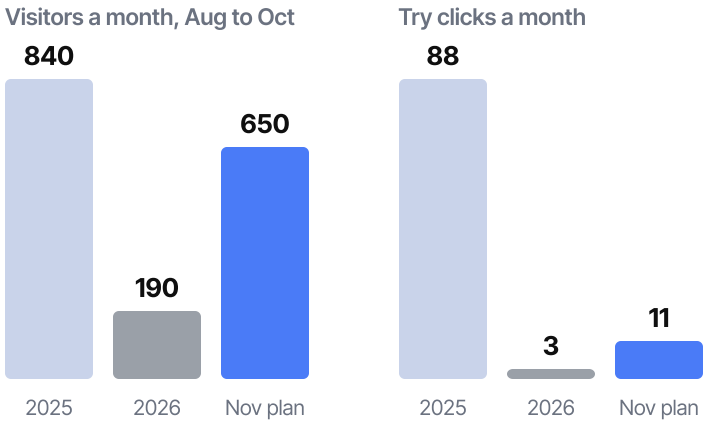

Rule for competing clients. We never use one client's data, documents or feature limits in the other's work. Each client's Demand Gen audiences exclude the other's app pages. Elements Copy & Sync also sits in brighttail's manager account, so we exclude it too.

RESULTS TODAY

All three accounts bring fewer trials and installs than at their best

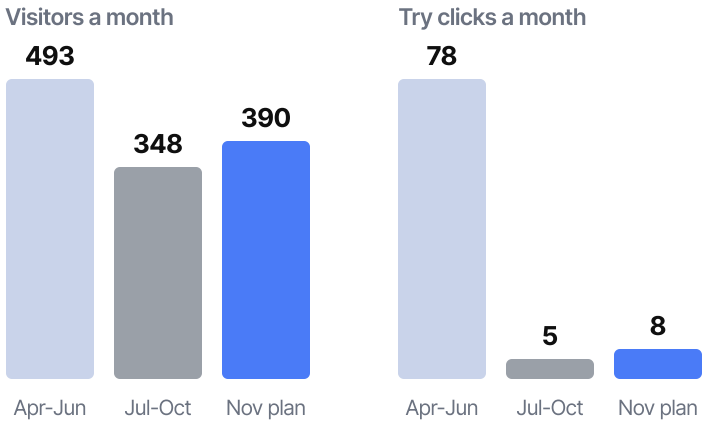

Each chart shows a monthly average from Google Ads. The blue bar is the November forecast from the growth plan each client received.

ij-solutions · Epic Clone

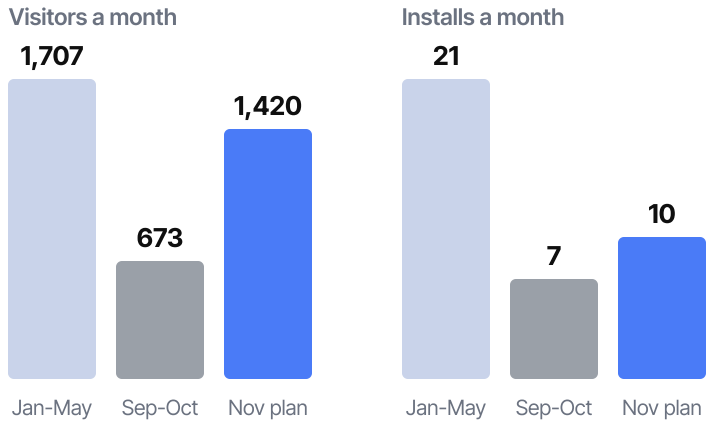

Few people search for the exact cloning terms, and Deep Clone and Elements bid on them too. Our ad showed on 1 in 10 of those searches.

SolDevelo · QAlity Plus

The Try rate fell from 22% to 6.5% in June, before we took over. From September our campaigns bid for clicks, which bought cheap Jira searches. The plan moves bidding back to conversions.

codefortynine · Deep Clone

Visitors fell when we cut broad match, but the install rate rose from 0.47% to 1.10%. Deep Clone trials from all channels also fell 34%.

Three causes we found on all three accounts

1. Atlassian's cookie banner hides trials and installs from GA4 and Google Ads, so the real numbers sit above what we report.
2. General Jira searches such as "jira login" and "jira tutorial" took budget and produced Try clicks from people who wanted Jira itself.
3. Searches for each specific job are small: 10 to 140 a month per cloning search, and about 1,600 a month for Jira test management.

Epic Clone is the cheapest of the four main cloning apps, and the least known

Deep Clone has 69 times more installs. Epic Clone has to win on one job: copying a full epic hierarchy into another project, with the data kept inside Atlassian.

	Epic Clone ij-solutions	**Deep Clone** codefortynine	**Elements Copy & Sync** Elements	**Clone Plus** Appfire
Installs	**165**	**11,432**	**2,330**	**1,597**
Reviews and stars	8 reviews · 4.1 ★	134 reviews · 4.5 ★	57 reviews · 4.7 ★	58 reviews · 4.4 ★
Price a year, 50 users	$495	$665	$595	$580
Free for up to 10 users	Yes	Yes	Yes	Yes
Latest release	3 Sep 2026	6 Nov 2026	3 Nov 2026	30 Sep 2026
Known for	A whole epic with its stories and sub-tasks, copied to another project. Built on Forge, so data stays inside Atlassian	Cloning at scale: up to 100,000 work items per clone, project templates and moves between Jira sites	Cloning plus syncing between projects and sites, with automation rules	Clone templates and changing the target project or issue type while cloning

Epic Clone strengths

It costs $170 a year less than Deep Clone at 50 users. It runs on Forge, so data stays inside Atlassian, which helps with security reviews. It also offers a cloning API and bulk cloning by JQL.

Weak spots

It has 8 reviews. It does not create projects or move work between sites. Jira's own clone now copies child items, attachments and links inside one space, so Epic Clone has to sell copying across projects.

IJ-SOLUTIONS · TOP 3 APPS BY INSTALLS

ij-solutions' two best sellers do the same job, and we advertise the second one

All five ij-solutions apps add up to 515 installs. Duplicate for Jira has more installs than Epic Clone at a lower price.

1 Duplicate for Jira

Cloning

214	10	$385
installs	reviews, 4.4 stars	a year, 50 users

42% of all ij-solutions installs

Clones any Jira issue, epic or hierarchy in one click, with control over every field. Teams can bulk duplicate issues found by a JQL search.

2 Epic Clone for Jira

The app our ads promote

Cloning

165	8	$495
installs	reviews, 4.1 stars	a year, 50 users

32% of all ij-solutions installs

Clones every issue in an epic into a different project. Users choose which issues, linked issues and sub-tasks to copy.

3 User Absence Planner

Out of office and resource planning

64	3	$150
installs	reviews, 5 stars	a year, 50 users

12% of all ij-solutions installs

Lets people plan time off in Jira, hands their issues to a colleague while they are away and shows their absence in user fields.

The takeaway. Duplicate and Epic Clone split the same buyers, reviews and installs. If ij-solutions picked one app to carry the cloning story, its reviews and installs would add up in one place. We ran User Absence Planner ads until May 2026 and paused them, and "jira resource management" was its best search term.

Every app this vendor sells, by installs

Duplicate for Jira 214 · Epic Clone 165 · User Absence Planner 64 · Project Milestones 56 · Projects Insight Edge 16

We built pages and content around the ads; next we prove evaluations

ij-solutions approved the €700 plan on 6 November and pauses spend in mid-December, a few weeks before the January to March peak.

DONE SO FAR

Running — **Google Ads for Epic Clone**
Search ads send people to the Marketplace listing. We rebuilt US targeting on 21 October from ij-solutions' license data by state.

Live — **Landing page flow and keyword plan (August)**
Jonas put it live across five pages by 24 August, including Try for free on the native Jira versus Epic Clone page.

Live — **Dedicated demo page**
Visitors choose a live demo with Jonas or a recorded walkthrough. Demand Gen ads will send people here.

Live — **Blog plans and a title rewrite**
We planned keywords for two posts that went live: project structures (2 July) and recurring tasks (11 September). Our rewritten title for the epic cloning guide is live.

Live — **Marketplace listing advice**
Our proposed tagline is live. Our product page advice (titles, a 60-second video, a security block) still needs a status check.

NEXT MOVES

Marketing — **Start here** **Judge the ads on real evaluations**
Ask ij-solutions for the monthly Marketplace evaluation report, with August to October as the baseline.
Evaluations · Owner: Toggle asks, ij-solutions sends

Marketing — **Propose a January restart**
ij-solutions pauses spend in mid-December. A January restart catches the January to March peak.
Evaluations · Revenue · Owner: Toggle

Marketing — **A Data Center to Cloud guide**
Epic Clone on Data Center clones epics only, and the cloud version clones the full hierarchy. Data Center ends in March 2029.
Evaluations · Owner: Julian

Product — **Get to 20 reviews**
Epic Clone has 8 reviews. Apps with 20 or more reviews hold 75% of all installs.
Evaluations · Owner: ij-solutions

Product — **Choose one cloning app**
Duplicate and Epic Clone split buyers. One app would carry all the reviews.
Evaluations · Revenue · Owner: ij-solutions

SOLDEVELO · COMPETITORS

QAlity Plus costs about a fifth of Xray and Zephyr, and our ads do not say so yet

Xray has 16 times the installs and outranks our ad on about 8 in 10 searches we share. Price is the clearest point where QAlity Plus beats them.

	QAlity Plus SolDevelo	Xray Xblend	Zephyr SmartBear	AIO Tests Navarambh	QMetry SmartBear
Installs	**1,594**	**25,205**	**14,796**	**3,437**	**2,062**
Reviews and stars	56 reviews · 4.6 ★	553 reviews · 4.3 ★	494 reviews · 4.1 ★	116 reviews · 4.9 ★	200 reviews · 4.7 ★
Price a year, 50 users	$750	$3,640	$3,710	$1,150	$2,405
Free for up to 10 users	Yes	No, $10 a month	No, $10 a month	Yes	Yes
Listing mentions Rovo AI	No	Yes	Yes	Separate Rovo app	Yes
Known for	Test steps written inside the Jira issue, so developers and testers work in one place	The category leader: traceability, automation and AI across the whole release process	Reusable tests across projects and no-code automation, sold with Rovo	AI test cases, BDD and reports. Runs paid ads to its own website	AI test management with BDD and CI/CD links

QAlity Plus strengths

QAlity Plus costs $750 a year at 50 users, and Xray costs $3,640. Its 4.6 stars beat Xray and Zephyr. It keeps testing inside the Jira issue, which suits teams that want QA next to development.

Weak spots

It has 56 reviews against 553. Xray shipped 12 cloud releases in the six weeks to 28 October, and QAlity Plus shipped 3 while it moved to Forge. SolDevelo says it has no AI test case generation, so it cannot match the AI claims.

SOLDEVELO · TOP 3 APPS BY INSTALLS

SolDevelo's biggest app is a time tracker, and its free test app has more users than the paid one

SolDevelo's seven apps add up to 11,432 installs. We advertise the third biggest.

1 Worklogs

Time tracking and timesheets

5,252	105	$200
installs	reviews, 4.5 stars	a year, 50 users

46% of all SolDevelo installs

Tracks the time each team member logs in Jira and turns it into time reports and timesheets for any period.

2 QAlity (free)

Test management

2,916	22	$0
installs	reviews, 3.8 stars	a year, 50 users

26% of all SolDevelo installs

This free app lets teams write test steps in Jira work items and track the results at no cost.

The app our ads promote

3 QAlity Plus

Test management

1,594	56	$750
installs	reviews, 4.6 stars	a year, 50 users

14% of all SolDevelo installs

In the paid version, teams run tests and report bugs from one place, plan regression tests and read traceability reports.

The takeaway. 2,916 teams already test inside Jira with free QAlity. They cost less to turn into paying QAlity Plus customers than strangers from search, which matches Julian's first finding: growth comes from people who already use you. We need SolDevelo's free to paid upgrade rate to size this.

Every app this vendor sells, by installs

Worklogs 5,252 · QAlity (free) 2,916 · QAlity Plus 1,594 · Multiple Checklists 1,050 · Team Planner 269 · Time Assistant 217 · Team Performance Reports 134

SOLDEVELO · DONE AND NEXT

We built the content side; the next step is the price story and the free users

SolDevelo is discussing internally whether to go ahead with our 30 October growth plan: Search 2,400 zł, Demand Gen 600 zł, a listing refresh and a review drive.

DONE SO FAR

Running — **Google Ads for QAlity Plus**
Search ads have sent people to the Marketplace listing since 29 June. We started a defect tracking campaign on 22 October.

Live — **Pillar page**
"The Complete Buyer's Guide to Jira Test Management", live since 30 July and linked from the Resources menu.

Live — **Solution page on defect tracking**
"Defect Tracking in Jira: From Bug Report to the Test That Found It" on soldevelo.com. We also drafted QAlity Plus landing page content in September.

Delivered — **Landing page flow and keyword plan (August)**
It maps each search to the page that answers it and sets Try for free and Book a demo as the button text.

Delivered — **Book a demo tracking plan (19 October)**
It counts Calendly bookings as conversions. It waits for access to SolDevelo's tag manager.

NEXT MOVES

Marketing — Start here — **Lead with price**
Use $750 against $3,640 in ads, the listing and a rebuilt QAlity Plus versus Xray and Zephyr post.
Evaluations · Owner: Toggle and Julian

Marketing — **Settle the June drop**
Ask for the evaluation report for May to August. It shows whether trials fell or the tracking broke.
Evaluations · Owner: Toggle asks, SolDevelo sends

Product — **Upgrade free QAlity users**
2,916 installs of free QAlity are the cheapest QAlity Plus buyers. In-app prompts and email reach them.
Revenue · Owner: SolDevelo

Product — **Close the review gap**
QAlity Plus has 56 reviews and Xray has 553. SolDevelo can ask active customers for a review after a test run.
Evaluations · Owner: SolDevelo

Product — **Decide on Rovo**
Xray, Zephyr and QMetry name Rovo on their listings. QAlity Plus needs a clear answer on how it works with Rovo.
Evaluations · Owner: SolDevelo

CODEFORTYNINE · COMPETITORS

Deep Clone leads its category by a wide margin, and Elements competes on price

These are the four competitors in codefortynine's own battle card, minus Easy Clone, which we could not find. Epic Clone (ij-solutions, 165 installs) also bids on the same searches.

	Deep Clone codefortynine	**Elements Copy & Sync** Elements	**Clone Plus** Appfire	**Bulk Clone Professional** LB Consulting Group
Installs	**11,432**	**2,330**	**1,597**	**658**
Reviews and stars	134 reviews · 4.5 ★	57 reviews · 4.7 ★	58 reviews · 4.4 ★	18 reviews · 4.7 ★
Price a year, 50 users	$665	$595	$580	$460
Free for up to 10 users	Yes	Yes	Yes	Yes
Latest release	6 Nov 2026	3 Nov 2026	30 Sep 2026	1 Nov 2026
Known for	Up to 100,000 work items per clone, project templates and moves between Jira Cloud sites. SOC 2 Type II	Cloning plus syncing between projects and sites. Elements was Atlassian's ITSM Partner of the Year 2025	Clone templates and changing the target project or issue type. Appfire does not advertise it	Cloning whole spaces with their schemes, plus Xray tests and plans

Deep Clone strengths

It has nearly five times Elements' installs and the most reviews. It lists 100,000 work items per clone, moves work between Jira Cloud sites, and holds SOC 2 Type II and the Enterprise Certified badge.

Weak spots

It is the most expensive: $70 a year more than Elements at 50 users, and Elements also syncs. codefortynine's rules keep competitor names out of the ads, so the ads have to sell depth.

CODEFORTYNINE · TOP 3 APPS BY INSTALLS

Deep Clone holds 60% of codefortynine's installs, and two other apps sit next to it

codefortynine's twelve apps add up to 19,101 installs. Its own battle card names the second and third apps as the cross-sell for Deep Clone users.

The app our ads promote

1

Deep Clone for Jira

Cloning and migration

11,432	134	$665
installs	reviews, 4.5 stars	a year, 50 users

60% of all codefortynine installs

Bulk clones up to 100,000 work items at once, copies projects into reusable templates and moves work between Jira Cloud sites.

2

External Data for Jira Fields

Integrations

1,673	86	$595
installs	reviews, 4.9 stars	a year, 50 users

9% of all codefortynine installs

Pulls data from Salesforce, SharePoint, SQL databases and REST APIs into Jira custom fields, so it shows on each work item.

3

Quick Filters for Jira Dashboards

Dashboards and reports

1,530	22	$690
installs	reviews, 4.5 stars	a year, 50 users

8% of all codefortynine installs

Adds filters, charts and tables to Jira dashboards, so one dashboard can serve every team, sprint or person.

The takeaway. About 11,400 teams already pay codefortynine for Deep Clone. Selling them a second app costs less than winning a new customer. codefortynine owns in-app messages and email, and we can support with remarketing to website visitors and content.

Every app this vendor sells, by installs

Deep Clone 11,432 · External Data for Jira 1,673 · Quick Filters 1,530 · Snipe-IT for Jira 984 · Google Calendar for Confluence 954 · Merge Agent 767 · Version Sync 401 · Slack for Confluence 380 · Advanced Bulk Edit 303 · External Data for Confluence 302 · Comment Custom Fields 269 · Comment History Log 106

CODEFORTYNINE · DONE AND NEXT

Our ads now reach the right searches; next we fix what the account counts and sell depth

The November plan keeps €3,500 a month: Search gets €3,100 with broad match on cloning terms, and Demand Gen gets €400 as a test.

DONE SO FAR

Running

Google Ads for Deep Clone

Our ads now show on 30% of cloning searches, up from under 10%, and sit on top 55% of the time. The install rate rose from 0.47% to 1.10%.

To confirm

Technical SEO by Julian (from 15 August)

Julian worked on schema, the sitemap and robots.txt, internal links, keyword mapping for 10 core pages and new meta titles. He will tell us what went live.

Delivered

Tracking guide for the new pages (7 November)

The guide adds tracking to the demo, migration and comparison pages that brighttail built, so we can run ads to them.

Delivered

Growth plan and case study

We sent the growth plan on 3 November and a one-page case study on the install rate on 6 November.

NEXT MOVES

Marketing

Start here Count the right try tag

In October an uncounted Atlassian tag recorded 24.8 tries and the counted one recorded 5.7. The real cost per try may sit near €112 against the €485 we report.

Evaluations · Owner: Toggle and codefortynine

Marketing

Sell depth in the ads

Lead with 100,000 work items, moves between sites and SOC 2. These justify the higher price.

JULIAN'S RESEARCH, APPLIED

Julian's six findings point to different moves for each client

Green means the client already has a strength to use. Orange means a gap we can help close. Grey means the finding does not apply yet.

Julian's finding	ij-solutions	SolDevelo	codefortynine
1. Growth comes from people who already pay	Five small apps with 515 installs give little base to sell into	Upgrade 2,916 free QAlity installs to QAlity Plus	Cross-sell two apps to 11,400 Deep Clone installs
2. Data Center customers must move to cloud by March 2029	Epic Clone has a Data Center version, so a move guide fits	Check whether QAlity Plus has Data Center users to move	Deep Clone moves cloud to cloud, so migration searches drew the wrong people
3. Trust signals hold the installs	It has 8 reviews, and Forge makes it eligible for Enterprise Certified	It has 56 reviews, and Xray has 553	It has 134 reviews, SOC 2 and Enterprise Certified
4. Answer questions on Google, Reddit and AI tools	ij-solutions has a strong blog and already writes about Rovo	Rivals name Rovo on their listings and QAlity Plus does not	Julian's SEO work is the base. Community answers come next
5. January to March is the peak, December the low	Spend stops in mid-December, so plan a January restart	Launch in November so the plan learns before January	Use December to finish page tracking before the peak
6. The store is crowded, so own one narrow job	Copy a full epic into another project	Run tests inside Jira for a fifth of the price	Clone at enterprise scale and move work between sites

One correction to the research: Atlassian retires the Cloud Fortified badge on 31 December 2026. Its successor, Atlassian Enterprise Certified, is open to Forge apps only, so the trust advice should name the new badge.

A FIRST DRAFT OF THE PLAYBOOK

Six steps repeat across all three clients, so they can open every Atlassian engagement

Each step comes from a problem we found at least twice. We can test this list against Julian's and Shaun's experience on the call.

1

Measure evaluations from day one

Ask for the vendor's monthly Marketplace evaluation report and check which ad tags the account counts. GA4 misses most paid visitors.

ALL THREE ACCOUNTS

2

Block Jira's own searches

Load a shared list of Jira navigation searches such as "jira login", "jira free" and "jira tutorial" before launch.

ALL THREE ACCOUNTS PAID FOR THESE

3

Own one job

Pick the one task the app does best. Build the ads, the listing headline and one page around it.

EPIC CLONE, QALITY PLUS

4

Earn trust

Plan the first 20 reviews, the Enterprise Certified badge and a trust page with security and support details.

IJ-SOLUTIONS, SOLDEVELO

5

Grow existing users

Find the upgrade and cross-sell paths. The vendor runs them, and we support them with content and remarketing.

SOLDEVELO, CODEFORTYNINE

6

Follow the calendar

Build pages from October to December, spend hardest from January to March and fix pages in December.

ALL THREE ACCOUNTS

When Jira interest peaks (Julian's index, 1.00 is a normal month)

QUESTIONS TO SETTLE ON THE CALL

We need answers to eight questions before the playbook is final

Some answers sit with us and some sit with the clients. The client questions can go into this month's report calls.

FOR JULIAN

1. Which of the codefortynine SEO fixes went live, and has organic traffic to the Deep Clone pages changed since August?
2. Is a page about Rovo worth building for each client? Searches for "rovo" grew from 1,300 to 3,600 a month.
3. Which client should get Atlassian Community and Reddit answers first?

FOR ALL THREE OF US

4. Do we sell listing work, review drives and upgrade campaigns as a service in the playbook, or keep them as advice?
5. How do we handle two clients who compete, if a third cloning vendor approaches us?

FOR THE CLIENTS

6. ij-solutions: will you send the monthly evaluation report, and which of your two cloning apps should lead?
7. SolDevelo: do you approve the growth plan, and how many free QAlity users upgrade to QAlity Plus?
8. codefortynine: which try tag is the source of truth, and what is a Deep Clone install worth over its lifetime?

SUGGESTED ORDER FOR THE CALL

1. **Results and the measurement gap**
   Pages 3 to 5
2. **Client by client: competitors, best sellers, done and next**
   Pages 6 to 14
3. **Julian's research applied to each client**
   Page 15
4. **Agree the playbook draft and an owner per question**
   Pages 16 and 17

SOURCES AND DEFINITIONS

Every number in this deck has a source you can check

Check these before you quote a number to a client. Marketplace numbers change daily.

Marketplace data

We pulled the public Atlassian Marketplace data on 7 November 2026. Installs, reviews and stars come from the cloud listings. Prices are list prices in US dollars for 50 users on a yearly cloud plan. Rovo mentions come from each app's latest cloud listing text.

Diagnosis

Our diagnosis, "SolDevelo and codefortynine: growth strategy diagnosis" (29 October 2026), covers the June drop, the try tag gap and the Xray release pace.

Work done

We checked our delivered documents in each client folder against the live websites on 7 November 2026.

Ad results

The ad numbers come from each Google Ads account. Monthly averages and forecasts come from the growth plans: ij-solutions (28 October), SolDevelo (30 October) and codefortynine (3 November). The October numbers come from each October monthly report.

Competitors

We used the ij-solutions competitor ad audit (November 2024), the SolDevelo competitor ad audit (September 2025) and codefortynine's Deep Clone battle card.

Market and badge

Julian's research deck (2 November 2026) covers the market. Atlassian's developer changelog and Enterprise Certified program page confirm the Cloud Fortified retirement on 31 December 2026.

Words we use. An **evaluation** is a free trial a Jira site starts from the Marketplace. A **Try click** is the click that starts it, as Google Ads counts it. An **install** is a Jira site that has the app switched on.
