THE MISSING HALF

Media brings them to the door. Something has to answer it.

Most agencies stop at the lead. The cost of an enrolment is decided after the click — in the minutes that follow, and in whether anyone was there.

RM 6.98M
MEDIA MANAGED

RM 13.15
PER CONVERSATION OPENED

1
DATASET, AD CLICK TO ENROLMENT

toggle

THE REAL PROBLEM

The 10× gap isn't in the media. It's in the handoff.

WHAT THE AD PLATFORMS REPORT

RM 95

48,414 leads on RM 4.61M of spend. We can defend this number to the decimal — the media did its job.

WHAT THE CLICK COST

WHAT THE CRM ACTUALLY ATTRIBUTED

RM 926.80

4,622 matched leads on the same spend. The rest were never reached, never replied to, or never routed to a human.

WHAT THE ENROLMENT COST

Between those two numbers sits exactly one thing: a conversation that either happened, or didn't.

toggle

WHERE IT LEAKS

Four leaks. None of them are media problems.

91%

of form-fillers immediately ask to chat

They complete an Instant Form, then click straight through to WhatsApp. The form is the doorbell. The conversation is the funnel.

3.9×

cheaper to open a conversation than a form lead

Same week, same account: **RM 13.15** per conversation against **RM 51.76** per form lead. The cheaper door is the one we under-use.

24 h

is the documented target first response

A prospect comparing four universities on a Saturday night does not wait until Monday. This is where paid demand quietly dies.

12

campuses, each with its own counsellor

Every lead needs routing by campus, language and programme before a human ever sees it. Done by hand, at this volume, it cannot hold.

toggle

THE ARCHITECTURE

Two layers. One loop.

LAYER ONE — DEMAND

Server-side conversion signal

Meta CAPI and Google Enhanced Conversions for Leads, running through a first-party gateway — not a browser pixel hoping to survive a cookie banner.

Bid against the real number

Validated outcomes pushed back weekly, so the algorithm optimises toward enrolments instead of form fills. Without this, CPL runs **130–150% higher**.

LAYER TWO — RESPONSE

Routed the moment it lands

Every form lead and click-to-chat is captured, tagged and routed by campus, language and programme — so it reaches the right counsellor in seconds, not on Monday.

The outcome, written back

What happened next becomes structured data — reached, qualified, booked, enrolled — flowing into Salesforce and straight back into the bidding.

Spend → response → outcome → back into the bidding. Break any link and the loop is just reporting.

toggle

NO GREY AREAS

What we're accountable for, in writing.

DEMAND

VOLUME & COST

- Media strategy & buying
- Creative production & testing
- Tracking & attribution build
- Cost per qualified lead

MEASURED **WEEKLY, PER CAMPUS**

RESPONSE

SPEED & REACH

- Lead capture & de-duplication
- Routing by campus & language
- CRM delivery inside 60 seconds
- Speed-to-lead, reported not assumed

MEASURED **LEAD BY LEAD**

OUTCOME

ENROLMENTS

- One integrated data flow
- Lead → application → enrolment
- Cost per enrolment, not per lead
- Where the funnel actually broke

MEASURED **PER INTAKE CYCLE**

Three accountabilities, one team, and one place the buck stops on each of them.

GOVERNANCE

One KPI. One report. One owner.

The KPI

Net-lead gap, per campus. Twelve campuses, twelve targets, tracked separately — with the worst three named every week.

✕ Blended CPL is an **explicit anti-goal** — it hides a weak campus under cheap traffic from a strong one.

✓ Two service levels sit beside it: **cost per qualified lead**, and **speed-to-lead reported every week**, campus by campus.

The cadence

- **Weekly** — one report: spend, response, outcomes
- **Monthly** — channel economics + funnel economics
- **Per cycle** — face-to-face strategic review
- **Annually** — face-to-face business review
- **Ad hoc** — answered within two working days

ONE NUMBER, **ONE VERSION OF IT**

The failure mode of a multi-vendor stack is finger-pointing. One accountable team removes it.

toggle

ENGAGEMENT

One onboarding. One gate. One invoice.

TIER	MONTHLY MEDIA	WHAT THE ENGAGEMENT COVERS	MANAGEMENT FEE
Pilot	60-day	Tracking rebuilt, response layer live, one channel proven to a gate	[TBD]
Growth	RM 50K – 250K	Full-funnel media, creative production, weekly governance	[TBD]
Scale	RM 250K – 1M	Adds CRM write-back, routing by campus, cycle reviews	[TBD]
Enterprise	RM 1M+	Dedicated pod, multi-entity operating model, board-level reporting	[TBD]

- One onboarding plan, one go-live date, one point of contact
- Pilot exits on a defined gate — or you walk, no notice period
- Performance-linked incentive on the enrolment number
- Named senior operators, written into the contract
