Built for the weather, not the podium

A positioning and creative strategy for ELT
Toggle Solutions · September 2026

The marketing has not caught up to the product

Every number on this slide is yours, from the 3 September call.

30%
reorder rate, organic, no retention strategy

6x
Shopee ROAS

1.75x
Meta ROAS, down from a 3x peak

10
subscribers, against a 65% target

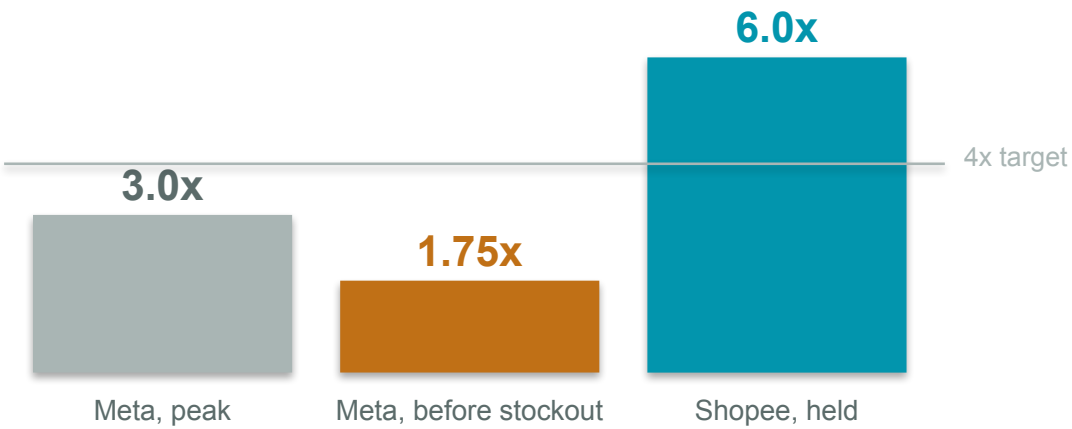

Launched January 2026. Sold out twice, roughly 2.5 months of lost trading in total, restocked 3 September. Selling on Shopee and Shopify only, with no Lazada, TikTok Shop or Google Ads.

Three in ten customers came back without anyone asking them to.

Source: ELT founder call, 3 September 2026. Average cart RM120.

The Meta decline is creative fatigue

Shopee held 6x across the same window that Meta fell from 3x to 1.75x.

Same offer, same audience, same price.

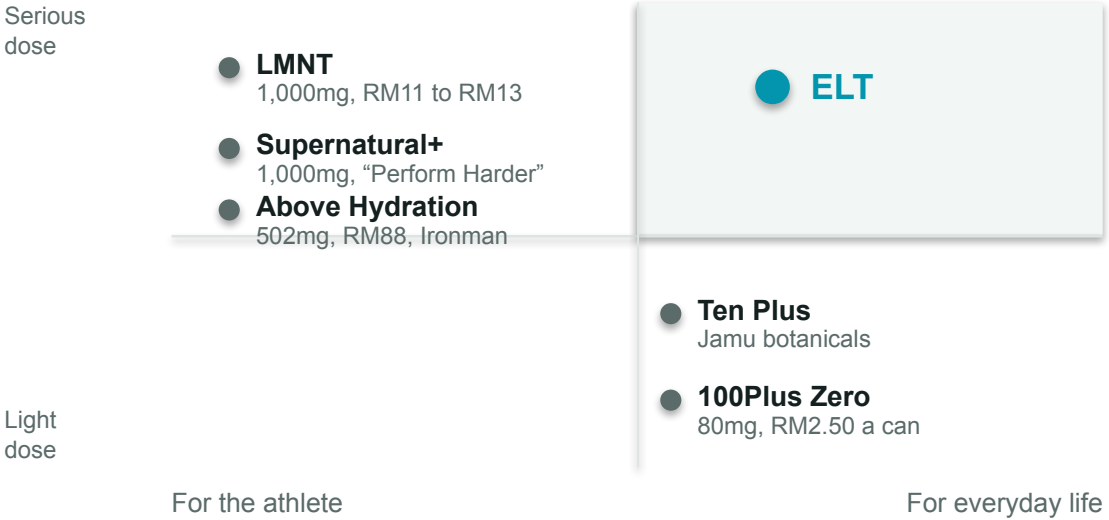

One channel held. The other halved.

You named creative strategy as the bottleneck. The channel split is the evidence.

Source: ELT founder call, 3 September 2026. Exact date windows pending Meta Ads Manager access.

Every competitor you named sells the podium

Four brands, one audience: the person who already calls themselves an athlete.

Everyone with a serious dose built it for athletes.

The only everyday option is 80mg in a can.

Above charges RM88. You are not the premium option, you are the reasonable one.

Above and Supernatural+ would have to drop their athlete rosters to compete here.

Sources: abovehydration.co, supernaturalplus.com, mytenplus.com, accessed 3 September 2026.

Built for the weather, not the podium

The enemy is the climate you live in, not your personal best.

For people who sweat in Malaysia, ELT is the everyday electrolyte dosed for the heat rather than the finish line, because 600mg is what a Tuesday costs and 1,000mg is what a race costs.

A CHEF MADE IT

Eight months of R&D and 29% real citrus. Nobody in your set can claim it.

600MG, NOT 1,000MG

Dosed for a Tuesday. LMNT and Supernatural+ run a race-day dose.

ALL NATURAL

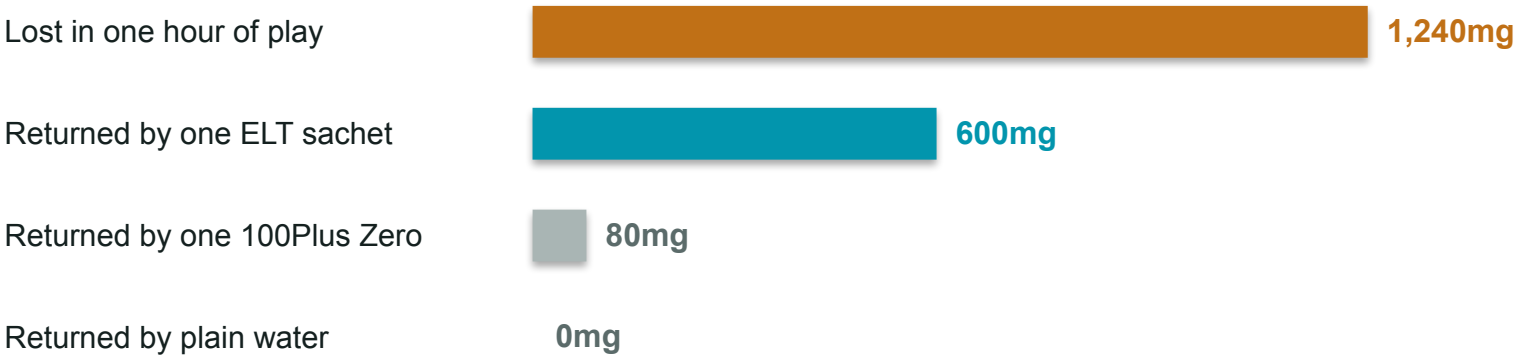

Stevia-sweetened and halal-certified. Closes the objection quietly.

The only position in the category that 100Plus cannot buy and Above cannot follow.

Confirmed on the 3 September call: approachable, not elitist.

An hour of play here costs 1,240mg of sodium

Measured on recreational runners in conditions almost identical to Kuala Lumpur.

Replacing one hour of sweat takes two ELT sachets, or fifteen and a half cans of 100Plus Zero.

This is the number the brand rests on, and nobody in the category is teaching it.

Nutrients 2021: 166 recreational runners, 29.6°C, 70% humidity. Men 54 mmol/h, women 39 mmol/h (about 900mg).

This rules people in, and it rules people out

A position that excludes nobody sells to nobody.

IN

Recreational padel, golf, soccer, squash, tennis and pickleball players.

Parents watching their kids play.

People who quit electrolytes over the taste.

Anyone commuting in the heat.

OUT

HYROX and competitive endurance.

Race-day dosing language.

Sponsored-pro creative.

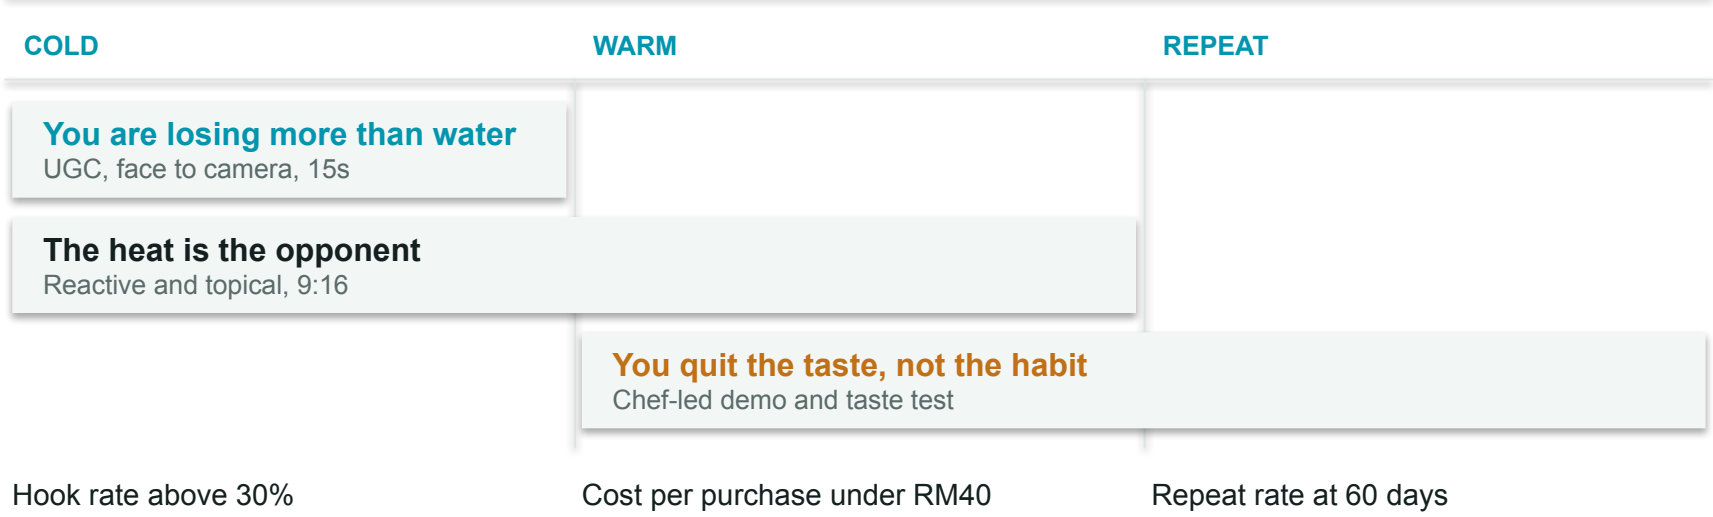

Anything implying you must be fit to qualify.

You made this call on the phone. Writing it down stops the creative drifting back.

Source: ELT founder call, 3 September 2026.

Three angles, one position, three stages

Each angle owns a stage and hands off to the next, instead of competing for the same budget.

The sodium angle opens, the heat angle carries, the taste angle brings them back.

Format evidence: creator-led beats product-only by 2.3x on hold rate, UGC hook rate 34% against 26% for studio.

toggle

What each angle actually says

The hook, the evidence under it, and the number it answers to.

Angle	The hook we would run	Why it should work	Measured on
Sodium loss (cold)	“One hour of padel in this heat costs you 1,240mg of sodium. Your water bottle gives back zero.”	Quantifies an invisible loss and removes blame. The number is measured, so it survives review	Hook rate above 30%
The heat (cold and warm)	“We stopped blaming ourselves and started blaming the weather.”	March 2026 heat alerts above 37°C, and 30 areas past unhealthy API in August. Always available	Cost per purchase under RM40
Taste (warm and repeat)	“You did not quit electrolytes. You quit the taste.”	A chef spent 8 months on it, and 30% already reorder without being asked to	Repeat rate at 60 days

One rewrite first: claim the sweat loss, which is measured, not the cramp cure.

Cramp causation is contested and leans neuromuscular (Sports Medicine, 2019). The rewrite keeps the payoff.

Three angles you are not running yet

The second wave. A new audience, a new intent pool, and a new revenue model.

COLD	WARM	REPEAT
“You packed the water. You forgot the salt.” Parent POV, sideline footage		
	“RM11 a sachet, or RM5.40.” Halal certified. Side-by-side, 9:16	
		“Never open the last sachet.” Founder to camera, email and ad
143,000 players, and zero brands talking to the parent	81% say halal certification drives their purchase	30% already reorder with nobody asking them to

Wave one sells the product. Wave two opens the audience, the switch and the habit.

Confirm ELT holds JAKIM product certification, not only halal-certified ingredients, before scaling the switch.

Creative volume is what stops the next decline

The decline happened on a fixed set of assets, so the plan carries a stated monthly output.

Daily Meta spend	New assets a month	Composition
RM150	6	3 angles × 2 formats
RM300	10	3 angles × 3 formats, plus 1 test
RM500	14	3 angles × 4 formats, plus 2 tests

Raising budget on a static library produced the decline from 3x. It would produce it again at RM500 a day.

Spend and creative output move together, or the fatigue repeats.

Asset counts are our recommendation, pending Meta frequency data once we have account access.

The parents on the sideline are unclaimed

Nobody in the category talks to the person buying for someone else.

397
pickleball and padel venues in Malaysia

143,000
active pickleball players, the highest in Asia

0
competitors in your set speaking to the parent

A parent buys for two, buys on a schedule rather than on impulse, and does not compare sodium specifications. Every testimonial on Above Hydration is an athlete.

The cheapest reach in the plan, and it only works from an approachable position.

Sources: PicklePadel.my and thepickleballers, 2026. Audience confirmed by Yuli, 3 September 2026.

Your two targets describe different businesses

ROAS is cart size divided by cost per purchase, so the two numbers are locked together.

At your RM120 average cart	Cost per purchase	ROAS it produces
Your CPP target	**under RM50**	**2.4x**
Your ROAS target, lower bound	RM30	4.0x
Your ROAS target, upper bound	RM24	5.0x

RM50 against a RM120 cart is 2.4x.

To hold CPP at RM50 and reach 4x, the cart has to reach RM200.

Move both levers: cost per purchase to RM35 to RM40, cart to RM150 to RM170. That lands ROAS between 3.8x and 4.9x.

Both targets are reachable, but not at the same time on today's cart.

Source: targets and the RM120 cart from the 3 September call.

RM500 a day, reached in three gated steps

Back-calculated from your six-month target, with a gate between each step.

Step	Daily Meta spend	Gate to clear before the next step	Target ROAS
Months 1 and 2	RM150	Cost per purchase under RM45	2.5x, rising
Months 3 and 4	RM300	Cost per purchase under RM40	3.5x
Months 5 and 6	RM500	Cost per purchase holding under RM40	4.0x to 4.5x

Six-month Meta spend RM57,000, against RM170,000 to RM230,000 of revenue at a blended 3.0x to 4.0x. At RM500 a day and a RM160 cart, that needs 375 orders a month, or 12 to 13 a day.

Each step buys the right to the next one.

Ad spend is pass-through, billed separately. Bands, not point estimates, until 30 days of live data.

Turn the 30% who reorder into subscribers

Ten subscribers today. The gap between those two numbers is the most valuable project here.

	One-time buyer	Subscriber at six months
Revenue per customer	RM120	RM840
Acquisition cost	RM40	RM40
Value against acquisition	**3x**	**21x**

At 375 orders a month, 65% on subscription is 244 subscribers.

Roughly RM34,000 a month recurring, or RM410,000 a year.

A subscriber is worth about seven times a one-time buyer.

Assumes six-month retention at a RM140 cart. We baseline and re-forecast after 90 days of cohort data.

Malaysia first, and Singapore has to wait

Your instinct on the call was right, and the arithmetic is worse than it looks.

Market	Cost per purchase	ROAS at a RM160 cart	Verdict
Malaysia	RM40	4.0x	Scale now
Singapore	**RM100 to RM120**	**1.3x to 1.6x**	**Hold**
Philippines	To be tested	To be tested	Test next, lower CPMs

Singapore CPMs run roughly three times Malaysia. That sits below your 4x target before a single creative decision gets made. ELT already ships to the Philippines.

Hold Singapore until the cart clears RM200. Test the Philippines first.

CPM and CPA multiples from Yi Yang's market read, 3 September 2026, to be validated against live delivery data.

Start with consulting, scale into management

You named creative strategy as the bottleneck, not budget or channel setup. This prices that.

Tier	What you get	Commitment	Fee
Positioning and creative strategy	The position, the angle-to-job architecture, the creative brief system, the spend model, the measurement baseline	One-off	TBD
Strategy plus production	The above, plus the monthly asset output	Monthly	TBD
Full management	The above, plus Meta and Shopee management, TikTok Shop and Lazada launch, subscription build	Monthly	TBD

Start at tier one. The bottleneck you named is cheaper to fix than to manage around.

Fees to be confirmed by Viknesh and Zaid before sending. Ad spend billed separately. No long-term lock-in.

What we need before spend goes live

Item, owner, and why it blocks the work.

Item	Owner	Why it blocks
Meta Ads Manager and GA4 access	ELT	Baselines cost per purchase, confirms the 3x to 1.75x decline
Shopify and Shopee back end	ELT	Baselines the 30% reorder rate and the real cart size
Batch and inventory schedule, two quarters	ELT	You sold out twice. Spend has to sit inside supply
Cost per unit at each batch size	ELT	Prices the bundle that lifts the cart to RM160
Sign-off on the position	Yuli	Every creative decision downstream forks here
Decision on the starting tier	Yuli	We can start inside a week of a yes

Monday, 7 September. If the position is right, we start tier one this month.
