Paid Media Proposal · Revision 3 · September 2026 · Prepared for Sedifly Pte Ltd

SEDIFLY

Meta Lead Generation

A Meta campaign to book Readiness Checks for Speedy Prep and Greenhouse, on S$3,000 of media a month. Google and TikTok are proposed as later phases and quoted separately.

S$3,000
Monthly media
Four campaign cells, each with a cost ceiling and a kill rule

47–68
Enquiries a month
Completed Readiness Check forms, at S$44–64 each

13–32
Readiness Checks attended
Consultations actually held with a strategist

2–9
Enrolments a month
At steady state, from month three onward

THE AUDIT

Four things we found on sedifly.com

Audited on 27 August 2026: the site, the programme and event pages, the team page and the public record.

1 · Two buyers, one funnel

The parent pays and the student uses the service. They answer to different arguments and sit on different platforms. Right now they see one message, one form and one follow-up.

What we do: split the funnel by payer and user. Separate campaigns, messaging, form logic and follow-up. The parent track carries risk, outcome and price transparency. The student track carries the founder's own route through polytechnic to Columbia.

2 · No tracking on the site

We found no Meta Pixel, GA4, GTM or TikTok tag in the served page source. Wix can load tags after consent, so this needs confirming rather than assuming.

What we do: week one installs the Pixel, the Conversions API, GA4 and named lead events, then verifies them (slide 16). Until that is live, Meta can only bid to impressions.

3 · Strong proof, thinly used

150+ offers across top US and UK universities, a nine-strategist bench from Stanford to Cambridge, and a founder who read for his degree at Columbia after polytechnic. Coverage in Davos, The Economist, Forbes Business Council and CBS.

What we do: require every cold ad to open with proof, and hold the 20%-of-market-price argument back to the second or third touch. Sedifly supplies the assets; the specification is on slide 11.

4 · A lead magnet already running

Free Zoom masterclasses alongside paid S$400 workshops capped at eight students. Nothing is being spent to fill them.

What we do: Cell 2 puts S$750 a month behind one named monthly masterclass, and every registrant, attendee and video viewer becomes a retargeting audience for Cell 3.

The admissions calendar — Oxbridge and medicine close 15 October, US Early Decision and Early Action close 1 November. Spend is weighted against those dates (slide 19).

THE CONSTRAINT THAT SHAPES THE PLAN

Meta cannot target a 17-year-old, so the plan targets parents

Meta's teen protections remove the whole targeting toolkit for anyone under 18. Sedifly's student is 16 to 18.

No interest or behaviour targeting

For under-18s an advertiser may target on **age and location only**. Gender, interests, Meta-inferred affinities and third-party categories are all disabled.

No custom audiences at all

Website, app, customer-list, engagement and video-view audiences **do not reach under-18s**. There is no retargeting a minor on Meta and no lookalike built from one.

Enforced twice over

Prohibited signals are greyed out in Ads Manager when the age range includes minors, and blocked in delivery even if a campaign somehow builds one.

What that means for this plan

The person who signs is **40 to 58, fully targetable and fully retargetable**, so all Meta prospecting is written to the parent. The **18-plus applicant** gets its own cell: JC2 leavers, polytechnic final year, national service, gap year and reapplicants are a legitimate Meta audience. The 16 to 17 cohort is reached through organic content and through TikTok in Phase 3 (slide 20), where the founder's story travels on its own.

Budget put against an audience Meta cannot deliver to is budget lost for the month, and at S$3,000 that is roughly a third of the plan.

WHO WE ARE BUYING

Three audiences, three arguments, three budget shares

Each maps to a Speedy Prep tier, so the ad set structure matches the product structure and every enquiry arrives already sorted into a programme.

The deadline parent — 46%

40–58 · Singapore · child in JC2, IB DP2, polytechnic final year or Y13 · sells **Focus**

- **Problem:** 15 October and 1 November are weeks away and the application is not ready.
- **Worry:** paying S$30–60K to a big-name firm and still collecting rejections.
- **Trigger:** a friend's child just got an Ivy offer through a consultant.
- **Hook:** "Why outstanding Singapore students still get rejected, and what is still fixable before 1 November."

The planning parent — 32%

38–55 · Singapore · child in Sec 4, JC1, IB DP1, polytechnic Y1–2 · sells **Build** and **Shape**

- **Problem:** knows grades alone will not clear a 4% acceptance rate, does not know what else counts.
- **Worry:** starting too late and finding out in JC2.
- **Trigger:** results season, a school talk, an older sibling's outcome.
- **Hook:** "The decisions that win a Top 20 offer get made two years before you apply."

The 18-plus applicant — 22%

18–21 · Singapore · polytechnic final year, JC graduate, NS, gap year, reapplicant · sells **Focus**

- **Problem:** came through a route nobody calls traditional and assumes the Ivy League is closed.
- **Worry:** being outclassed by IB students with polished profiles.
- **Trigger:** the founder telling his own story first-hand.
- **Hook:** "Polytechnic to Columbia. Here is the route, step by step."

Shares are of the S$2,250 direct-enquiry pool — S$1,035 deadline parent, S$720 planning parent, S$495 18-plus applicant. Cell 2's S$750 serves all three and is not split.

THE MEDIA PLAN

Where the S$3,000 goes

Daily figures are the monthly budget over a 30-day month, and every column sums to its stated total. No cell runs an awareness objective; all four optimise to a submitted form. The forecast that follows from this table is on slide 9.

#	Cell	Job	Monthly	Daily	Share	Cost per	Output
1	**Enquiry prospecting** 3 ad sets, one per audience	Readiness Checks on strategists' calendars this month	**S$1,200**	**S$40**	**40%**	S$45–55	**21–26 enquiries**
2	**Masterclass registration** One named monthly session	Low-cost reach, and the audience Cell 3 retargets	**S$750**	**S$25**	**25%**	S$15–22	**34–50 registrations**
3	**Retargeting** 4 warm tiers, 18-plus only	Stay present across a six to eighteen month decision	**S$600**	**S$20**	**20%**	S$28–38	**15–21 enquiries**
4	**Creative test** 1 test, 2 variants at S$225 each	Decide what Cell 1 scales next month	**S$450**	**S$15**	**15%**	S$50–70	**6–9 enquiries**
	Total working media	**Paid to Meta in full, no markup on spend**	**S$3,000**	**S$100**	**100%**	—	**42–56 + 34–50 regs**

Why 15% is held for testing

A S$3,000 account cannot afford to learn slowly. Cell 4 runs deliberately inefficiently and its winners move into Cell 1 each month, which is how a small budget improves rather than plateaus.

The 42–56 versus 47–68 gap

Cells 1, 3 and 4 produce 42–56 enquiries directly. The masterclass adds a further 5–12 once attendees submit the form, which takes the total to 47–68. The arithmetic is on slide 9.

Not in this budget

All creative production, the HubSpot licence and WhatsApp platform fees (slide 15), and Toggle's own fee. Media is quoted clean so the arithmetic stays checkable.

HOW EACH CELL IS BUILT

Four cells, each with a job, a ceiling and a kill rule

S$1,200 · 40%

Cell 1 · Enquiry prospecting

Books Readiness Checks this month.

- Leads objective, Instant Form set to **Higher Intent**, which adds a review step before submit.
- Three ad sets matching slide 4. Parent cells floor at age 30, applicant cell runs 18–21.
- **Ceiling S$55.** Five days above it on S$150 or more of spend and the ad set pauses.
- **Kill rule:** creative below 1.0% CTR after 1,500 impressions is retired, not given more time.
- **Expect S$45–55 → 21–26 enquiries.**

S$750 · 25%

Cell 2 · Masterclass registration

Fills the session and builds the warm audience.

- Leads objective, Instant Form set to **More Volume**: name, email, mobile, grade.
- One session name every month, so spend compounds against a single asset instead of restarting.
- Ten-day flight into each session, then a 48-hour closing push.
- **Expect S$15–22 → 34–50 registrations.** 45–55% attend; 35–45% of attendees then submit the form.
- Costs more per enquiry than Cell 1 and closes better downstream.

S$600 · 20%

Cell 3 · Retargeting

Holds attention across a long decision.

- Four warm tiers, all 18-plus per slide 3: form openers 30 days, masterclass registrants and attendees 90 days, video viewers and page engagers 180 days, site and blog readers 180 days.
- Sequenced creative: proof, then objections, then price transparency, then deadline.
- **Frequency capped at 3 per 7 days.**
- **Expect S$28–38 → 15–21 enquiries.** The allocation ladder is on slide 8.

S$450 · 15%

Cell 4 · Creative test

Decides what Cell 1 scales next month.

- **One A/B, two variants at S$225 each**, over 14 days.
- Month one tests the hook only: the rejection angle against the polytechnic-to-Columbia angle. Both variants supplied by Sedifly.
- **Read at ≥40% relative CTR lift, 95% confidence.** Anything smaller is a null result.
- **Expect S$50–70 → 6–9 enquiries** as a by-product.
- Full plan on slide 7.

Reallocation rule — from week three, a cell holding cost per enquiry more than 20% under its ceiling for seven straight days may draw up to S$200 from the cell furthest above its ceiling. Every move appears in that week's report.

CELL 4 IN DETAIL

What S$450 can decide, and what it cannot

Spread across four tests, S$450 is eight variants at S$56 each. At a S$50–70 cost per enquiry that is about one enquiry per variant, which decides nothing. Concentrated into one A/B it decides something real.

Month one	Detail
The variable	Hook only. **Angle A**, the rejection gap, against **Angle B**, polytechnic to Columbia. Same audience, same form, same offer.
Variants	**2**, at **S$225 each**, over 14 days. Both supplied by Sedifly against the specification on slide 11.
What that buys	**7,500 to 12,500 impressions per variant** at the S$18–30 CPM this audience carries
Primary metric	Outbound CTR. It is the only metric with enough events at this volume to be readable in 14 days.
Guardrail	Cost per form-open must not be more than 15% worse than the incumbent
Evidence threshold	**40% relative CTR lift at 95% confidence.** At 7,500 impressions an arm that resolves 1.0% against 1.5%. It does not resolve 1.0% against 1.25%, and we will report that as a null result.
If neither clears	Both retire and Sedifly supplies a new pair. No ad gets extra time to prove itself.

S$2,750

What a cost-per-enquiry test costs per variant

50 conversions per arm at a S$55 cost per enquiry. That is six times the whole test cell, so month one reads CTR instead.

When cost-per-enquiry testing becomes possible

Month three. Pooling three months of Cell 1 gets each arm to roughly 50 enquiries, and cost per *qualified* enquiry becomes a fair promotion test. Until then we promote on CTR and say so in the report rather than reading a six-enquiry sample as a result.

Months two and three — test two is the messenger, founder against strategist. Test three is the destination, Instant Form against click-to-WhatsApp. One variable at a time, and null results get reported alongside winners.

CELL 3 IN DETAIL

Retargeting launches with the rest and scales with the pool

Cell 3 goes live alongside Cells 1, 2 and 4 at S$600, seeded on Meta audiences that need no pixel history. The allocation then moves with the audience we actually have, and the ladder is published now rather than negotiated later.

Retargetable 18-plus pool at monthly review	Cell 3	30-day frequency	Where the difference comes from
1,500 to 3,499	**S$300**	5.4–12.5	S$300 moves to Cell 2, the fastest pool-builder, and comes back as the pool grows
3,500 to 6,499 launch allocation	**S$600**	5.8–10.7	No change. This is the plan on slide 5.
6,500 to 9,999	**S$900**	5.6–8.7	S$300 from Cell 1
10,000 and above	**S$1,200**	up to 7.5	S$400 from Cell 1 and S$200 from Cell 2. Cell 3 becomes the second-largest cell.

Frequency assumes an S$16 CPM against the pool over 30 days, and every band keeps the cell inside a 5 to 12 impression window. Past roughly 8 to 10 impressions a month, retargeting stops converting and starts irritating the parent who pays. Whichever band applies, the four cells still sum to S$3,000.

What Cell 3 runs against on day one

Three of the four tiers need no pixel history: **Page and Instagram profile engagers** over 365 days, **50%+ video viewers** of the founder and strategist verticals, and **Instant Form openers who did not submit**, which starts filling the hour Cell 1 goes live. Any past-enquiry list Sedifly can export is uploaded on day one too. The site and Insights-reader tier joins from week three once the Pixel has data.

How the pool grows

Cells 1 and 2 feed Cell 3 continuously. Cell 2 alone adds **34 to 50 masterclass registrants a month** plus their video-view audiences, and Cell 1's form openers accumulate daily. A pool that starts in the S$300 band should reach the launch band inside the first quarter.

Reviewed monthly — the pool size, the band it lands in, and any reallocation, in that week's report.

THE FORECAST

S$3,000 in, traced to an enrolment

Five stages, defined on the right so there is no ambiguity about what each number counts. These are **per-cohort** figures for one month's spend; when the enrolments land is slide 10. Sedifly's own historical rates replace every band here as soon as you share them.

Stage	Rate applied	Low	High
Media invested	—	**S$3,000**	**S$3,000**
Enquiries, direct (Cells 1, 3, 4 · S$2,250)	S$40–54 each	**42**	**56**
Masterclass registrations (Cell 2 · S$750)	S$15–22 each	**34**	**50**
attended the session	45–55%	**15**	**27**
then submitted the form, becoming an enquiry	35–45%	**5**	**12**
Total enquiries	—	**47**	**68**
Cost per enquiry	S$3,000 ÷ enquiries	**S$64**	**S$44**
Qualified, scored A or B	50–65%	**23**	**44**
Readiness Check booked	75–90%	**17**	**39**
Readiness Check attended	80–83%	**13**	**32**
Enrolled	20–30%	**2**	**9**
Media per enrolment	S$3,000 ÷ enrolments	**S$1,500**	**S$333**

Stage definitions

Stage	Counts	HubSpot
Enquiry	A completed Readiness Check form, from a Meta Instant Form or the HubSpot form on site	**Lead**
Qualified	Scored A or B on slide 14, contactable, in scope	**MQL**
Booked	A 30-minute slot held on a strategist's calendar	**SQL**
Attended	The consultation took place	**Opportunity**
Enrolled	Programme paid for	**Customer**

On the masterclass line

A masterclass registration is **not** an enquiry. It becomes one only when that person submits the Readiness Check form. So the masterclass converts into the *enquiry* total and then runs through the same qualification and booking rates as every other enquiry. The booking rate is applied once, at the "Readiness Check booked" row.

TIMING

When those enrolments land

Slide 9 counts what a month's enquiries are eventually worth. It is not what shows up in month one's accounts. Admissions is a considered purchase on a dated calendar, so the lag is worth stating before it becomes a surprise.

Calendar month	What lands in it	Enrolments	Media per enrolment
Month 1	30% of cohort 1, the deadline-driven Focus families who decide fast	**0–2**	S$1,500 or more
Month 2	45% of cohort 1 plus 30% of cohort 2	**1–6**	S$500–3,000
Month 3	25% of cohort 1, 45% of cohort 2, 30% of cohort 3	**2–9**	S$333–1,500
Month 4 onward	**Steady state.** Cohorts fully overlap and one month in equals one month out.	**2–9**	**S$333–1,500**
Months 1–3 together	**68% of what those three cohorts will eventually be worth**	**4–18**	**—**

Distribution of 30%, 45% and 25% across months m, m+1 and m+2, applied to the 2–9 cohort yield on slide 9 and floored at each step. The remaining 32% of the first quarter's enrolments land in month four and later.

The assumption we most want to replace

Our working cycle: enquiry to booked, **3 to 10 days**. Booked to attended, **5 to 14 days**. Attended to decision, **7 to 21 days** for an application-year family under a 1 November deadline and **30 to 120 days** for a Sec 4 or JC1 parent with two years of runway. Blended median **21 to 45 days**, with a long tail.

Your median days-to-close by programme tier replaces this table.

What this means for judging the account

Month-one enrolments will read as a false negative, and a January start makes it worse because January sells into the slowest window of the year (slide 19). **Month three is the first month whose enrolment count means anything.** Cost per qualified enquiry is readable from week four and is the metric to watch before then.

CREATIVE REQUIREMENTS

Five angles, and what each cell needs Sedifly to supply

Toggle does not produce creative. Below is the specification each cell needs in order to run, for Sedifly or Sedifly's creative partner to produce. Formats are stated so the brief is unambiguous, and we decide which of them gets budget.

Two constraints on anything we put budget behind. Every cold asset opens with proof, whether that is the offers, the strategist bench or the founder's own route. The price argument stays out of cold creative and appears at the second or third touch, where it reads as published pricing rather than a discount.

A · The rejection gap

Cold · parent · Cells 1 and 2

Sedifly's own best-performing line, already proven as a webinar title. Curiosity plus a named worry, aimed at the payer.

"Your child has the grades. So did everyone rejected last year."

Sedifly supplies: 9:16 strategist vertical, plus a 4:5 offer-wall static

B · The improbable path

Cold · 18-plus student and parent · Cells 1 and 4

Founder-led, first person, phone camera. The asset Sedifly owns that no competitor can copy.

"Polytechnic to Columbia. Here is the route, step by step."

Sedifly supplies: 9:16 founder vertical, phone-shot, burned captions

C · Published price

Warm · parent · Cell 3

Never run cold, because price to a stranger reads as a discount. Used at touch two or three as transparency in an opaque market.

"Every other firm quotes on a call. Ours is on the website."

Sedifly supplies: 4:5 static and 1:1 carousel, price panel as frame 2

D · The strategist bench

Cold and warm · all · Cells 1 and 3

Nine strategists from Stanford, Columbia, Cornell, Brown, LSE, UCL and Cambridge, face to camera, fifteen seconds each.

"I read for my degree at Cambridge. I will read your personal statement."

Sedifly supplies: 9:16 vertical, one per strategist

E · The calendar

Warm · parent · Cell 3, seasonal

Runs only in the six weeks before 15 October and 1 November, so the urgency is factually true.

"Oxbridge closes 15 October. Early Decision closes 1 November."

Sedifly supplies: 9:16 countdown cut from the masterclass recording

What we will not put budget behind — stock photography of smiling students in front of ivy-covered buildings. Every competitor already uses it. If that is all that is available, we would rather run fewer assets.

AD POLICY & PDPA

Four things on the website that need rewriting before they run as ads

Better to rewrite these in week one than lose an ad account in week six. Each rewrite keeps the claim's force and removes the enforcement risk. All four need Sedifly's sign-off before launch.

On sedifly.com today	Why it is a problem in a paid ad	The wording the ads need instead
"100% ACCEPTANCE TRACK RECORD"	Meta's advertising standards prohibit copy implying a guaranteed outcome. Education claims draw manual review, and a rejection at account level costs far more than one at ad level.	**"150+ offers secured across top US and UK universities, more than 30% Ivy League and Oxbridge."** A countable fact instead of a promise, and the stronger claim: specifics outperform superlatives in this category.
Student-addressed copy on a 16–18 audience	Under-18s cannot be targeted on interests or behaviour, cannot be retargeted, and are not reachable by any custom audience (slide 3). Copy written to the student is being served to the parent.	**Parent-addressed copy across all Meta prospecting**, with the student voice kept for the 18-plus cell and for TikTok in Phase 3. Same story, different second person.
"Have the drive for the Ivy League?" and similar	Meta's personal-attributes policy prohibits copy that asserts or implies knowledge of the reader's characteristics, academic standing included. Second-person diagnostic questions are the usual trigger.	**"Most Singapore applicants we meet already have the grades. Here is what is usually missing."** Collective framing instead of an assertion about the reader.
Lead-form data capture	Singapore's PDPA requires clear consent, a stated purpose and a retention position. A meaningful share of enquirers will be minors, whose data carries extra care obligations.	**A consent statement and linked privacy notice on every Instant Form**, purpose limited to admissions consultation, and a documented deletion window. Specified by Toggle, written and approved by Sedifly.

We ask for substantiation before the ad runs — the offer list behind "150+ offers" is on the access checklist on slide 24 for exactly this reason.

QUALIFICATION · BEFORE THE ENQUIRY ARRIVES

Filtering in the targeting and in the form

Senior strategist hours are the scarce resource in a seventeen-person firm, and an unqualified booked call spends them at full price. So the filter sits in the ad and the form rather than in the call.

01 In the ad, before the click

Costs nothing to filter here

- Ad sets built **per programme tier**, so the audience is already sorted into Shape, Build or Focus before anyone clicks.
- Creative that **names the cohort**, for example "if your child sits IB DP2 this year", so the wrong reader scrolls past instead of filling in a form.
- **Price signalled at touch two.** A parent who self-selects on budget before the form costs less than a strategist discovering it on a call.
- **Exclusion audiences** for current clients, past enquirers in an open sales conversation, and anyone who has already booked.

02 In the form, seven questions

Higher Intent type, one purpose each

- **Who is completing this?** Student or parent. Sets the whole follow-up track.
- **Current level.** Sec 3–4, JC1 or DP1, JC2 or DP2, polytechnic Y1–2, polytechnic final, awaiting results, gap year. Routes the tier.
- **Intended intake year.** Separates this cycle from the next.
- **US, UK, both or undecided.** Routes to the US or UK strategist bench.
- **Target band.** Ivy and US Top 10, US Top 20, UK Top 20, or open to guidance. Calibrates expectations.
- **School.** Free text, and the best single quality proxy available.
- **Budget band.** Test cell only, because it will raise cost per enquiry. Whether it raises cost per *qualified* enquiry is the question worth answering.

These three fields already exist on Sedifly's form — respondent type, school and current grade are being collected today. They are not yet used to route, score or optimise, which is what slide 14 does with them.

QUALIFICATION · AFTER THE ENQUIRY ARRIVES

Speed, then a booking gate, then a score

03 The first sixty seconds

The largest controllable variable

- **Real-time webhook** from Meta Lead Ads into HubSpot rather than the CSV export. Leads sitting in Ads Manager overnight is the most common cause of a "bad lead quality" verdict that had nothing to do with targeting.
- **WhatsApp auto-reply inside 60 seconds** on the number Sedifly already publishes, carrying the booking link and one line of proof.
- **Human contact inside 5 minutes**, 10:00 to 22:00 SGT. Outside those hours, first contact by 10:00 the next morning.
- **Three touches over 72 hours**, WhatsApp then call then email, after which the record moves to nurture rather than being reworked indefinitely.

04 The booking gate

A little friction after commitment

- The Readiness Check becomes a **booked 30-minute slot**, not a callback. A calendar entry converts several times better than a promise to phone.
- A **short pre-call form** on the confirmation page: current or predicted grades, three target schools, and one line on what the student has built outside class.
- **WhatsApp reminders at 24 hours and 2 hours.** Show-up rate is where budget leaks quietly.
- Anyone who will not complete the pre-call form goes to the masterclass track instead. That costs Sedifly nothing and keeps the relationship open.

05 Score and route

Four dimensions, 0–3 each, 12 points

- **Timeline fit.** Application year 3, one year out 2, two-plus years 1, cycle closed 0.
- **Destination fit.** Named US or UK Top 20 3, one region 2, undecided 1, out of scope 0.
- **Payer present.** Parent completed the form 3, parent named 2, student only 1, neither 0.
- **Responsiveness.** Replied within the hour 3, same day 2, within 72h 1, no reply 0.

Routing

A, 10–12: senior strategist within 24h. **B, 7–9:** strategist within 48h. **C, 4–6:** masterclass and nurture, no call. **D, 0–3:** email nurture only.

What this does commercially — these steps raise cost per enquiry and lower cost per enrolment. If Sedifly would rather have the cheaper headline number, we can deliver it and we will tell you what it cost downstream.

THE HUBSPOT BUILD

What HubSpot Starter delivers, and the two gaps it leaves

You are onboarding HubSpot now, so this is written against it. **Starter Customer Platform covers four of the six things the plan needs**, including the CRM-to-Meta event sync. The other two are handled without a Professional licence.

What the plan needs	On Starter	How it is delivered
Meta Instant Form leads into the CRM	Native	Connect the Facebook Page and ad account in HubSpot's Ads tool. Leads arrive as contacts in seconds, which is what the 60-second SLA on slide 14 depends on.
The five-stage lifecycle on slide 9	Native	Map HubSpot's Lead, MQL, SQL, Opportunity and Customer stages onto enquiry, qualified, booked, attended and enrolled. No custom objects needed.
CRM events back to Meta	Native · 5 events	HubSpot's Meta Conversions API sync. Starter allows **five ad conversion events, exactly the five stages**. Needs the Meta Pixel installed in HubSpot and the ad account inside a Business Manager. **Only forms built in HubSpot sync**, so the on-site Readiness Check form has to be a HubSpot form embedded on Wix.
Reporting for the weekly one-pager	10 dashboards	Standard dashboards carry stage counts and source. Toggle builds the weekly one-pager on slide 17 from those plus Ads Manager.

Gap 1 · Scoring and routing

Marketing Hub Professional is **US$890 a month, about S$1,157**, which is more than a third of the media budget. We do not recommend it at this stage. Instead **Make.com** reads the seven form answers, computes the A–D score from slide 14, writes it to a custom contact property and sets the record owner. About **S$14 a month**, and it gives us a scoring model we can change without a licence upgrade.

Gap 2 · WhatsApp

HubSpot's native WhatsApp channel sits behind Professional too. The five-minute reply on slide 14 runs through a dedicated provider instead: **360dialog at about S$70 a month** or **Respond.io at about S$103**. Both integrate with HubSpot and both pass Meta's per-message rates through at cost. Wati is cheaper on paper and marks marketing messages up 60% and utility messages 80%, so we would avoid it.

Third-party cost — HubSpot Starter Customer Platform, 3 seats S$78 · Make.com Core S$14 · WhatsApp provider S$70–103 · Meta per-message fees about S$16. Total **S$178–211 a month**, plus S$26 per extra seat. All contracted by Sedifly at cost, with no Toggle margin.

WEEK ONE, AND THE WEEK-NINE DECISION

Nothing launches until the measurement layer is verified

We could not detect a Meta Pixel, GA4, GTM or TikTok tag in the served source of sedifly.com on 27 August 2026. Wix can inject tags after consent, so the first job is confirming rather than assuming. Earliest sensible launch is day 6, because launching into a blind account buys a month of data nobody can optimise on.

The build, days 1 to 5

- **Meta Pixel** via Wix's native integration and inside HubSpot, plus the **Conversions API** server-side, deduplicated on a shared `event_id`.
- **Named events** rather than a generic Lead: *ViewContent* on Speedy Prep and Greenhouse, *CompleteRegistration* on masterclass sign-up, *Lead* on the Readiness Check form, *Schedule* on a confirmed booking.
- **HubSpot form** built and embedded on the Wix page, since only HubSpot forms sync to Meta (slide 15).
- **Meta Lead Ads to HubSpot webhook**, real-time, with an alert if a lead does not land inside 60 seconds.
- **WhatsApp provider** connected to HubSpot on the published +65 number.
- **GA4 and GTM** installed now rather than when Google launches, plus a documented UTM taxonomy and the iOS Aggregated Event Measurement priority order.

The Conversion Leads decision, week 8 to 10

The event	HubSpot's **Qualified** stage. Not *Enrolled*: at 2 to 9 a month that event will never be dense enough to optimise on.
The volume	The account produces **23 to 44 a month**, about 5 to 10 a week. Meta wants **about 50 per ad set per week** to leave the learning phase reliably.
The gap	**This account delivers 10 to 20% of that.** Consolidating to one ad set helps and does not close it.

If the gate does not clear

All four criteria are needed: 100 cumulative Qualified events synced, 15 a week on a trailing four-week average, event match quality of 6.0 or better, and agreement to consolidate ad sets. The CAPI sync gets built either way, because it improves the standard Leads goal too.

A, the likely path. Keep the Leads goal, consolidate ad sets to concentrate the signal, and reallocate weekly on cost per qualified enquiry from the HubSpot data. **B.** Use the Qualified list as a lookalike seed, which needs about 100 records in total rather than 50 a week and is reachable by week 10. **C.** Revisit at S$6,000 or more of media in month five or six, with Google and TikTok feeding the same CRM.

REPORTING

The weekly one-pager, in Sedifly's own stages

Below is the format with **illustrative figures**, so you can see the shape. It is fixed from week one so week-on-week comparisons hold.

Sedifly · Weekly Performance · Week 07

Illustrative figures

Headline. 13 enquiries and 10 masterclass registrations. Cost per enquiry S$53, down 7% week on week. Qualified rate 69%. Best cell: retargeting at S$28 an enquiry. Watchlist: the planning-parent ad set in Cell 1 at S$71, which is 29% over its ceiling.

Cell	Spend	Enquiries	Cost per	Qual.	Per qual.	vs ceiling
1 · Enquiry prospecting	S$277	6	S$46	4	S$69	−16%
2 · Masterclass	S$173	10 regs	S$17	—	—	−23%
3 · Retargeting	S$138	5	S$28	4	S$35	−26%
4 · Creative test	S$104	2	S$52	1	S$104	n/a
Total	S$692	13 + 10	S$53	9	S$77	**−18%**

Creative. Two promoted, three retired below 1.0% CTR, the A/B at 61% of its read threshold. **The one decision we took:** paused the planning-parent ad set on day 5 at its ceiling and moved S$40 a day into the masterclass ahead of Thursday's session.

Weekly, every Monday

One page, the shape on the left. Headline, the cell table with **cost per qualified enquiry next to cost per enquiry**, creative promoted and retired, and the single decision we took with the reason. Two minutes to read.

Monthly, live

The full five-stage funnel against slide 9, the cohort view against slide 10, a re-forecast on actuals, next month's test plan, and a plain statement of what did not work. Forty-five minutes.

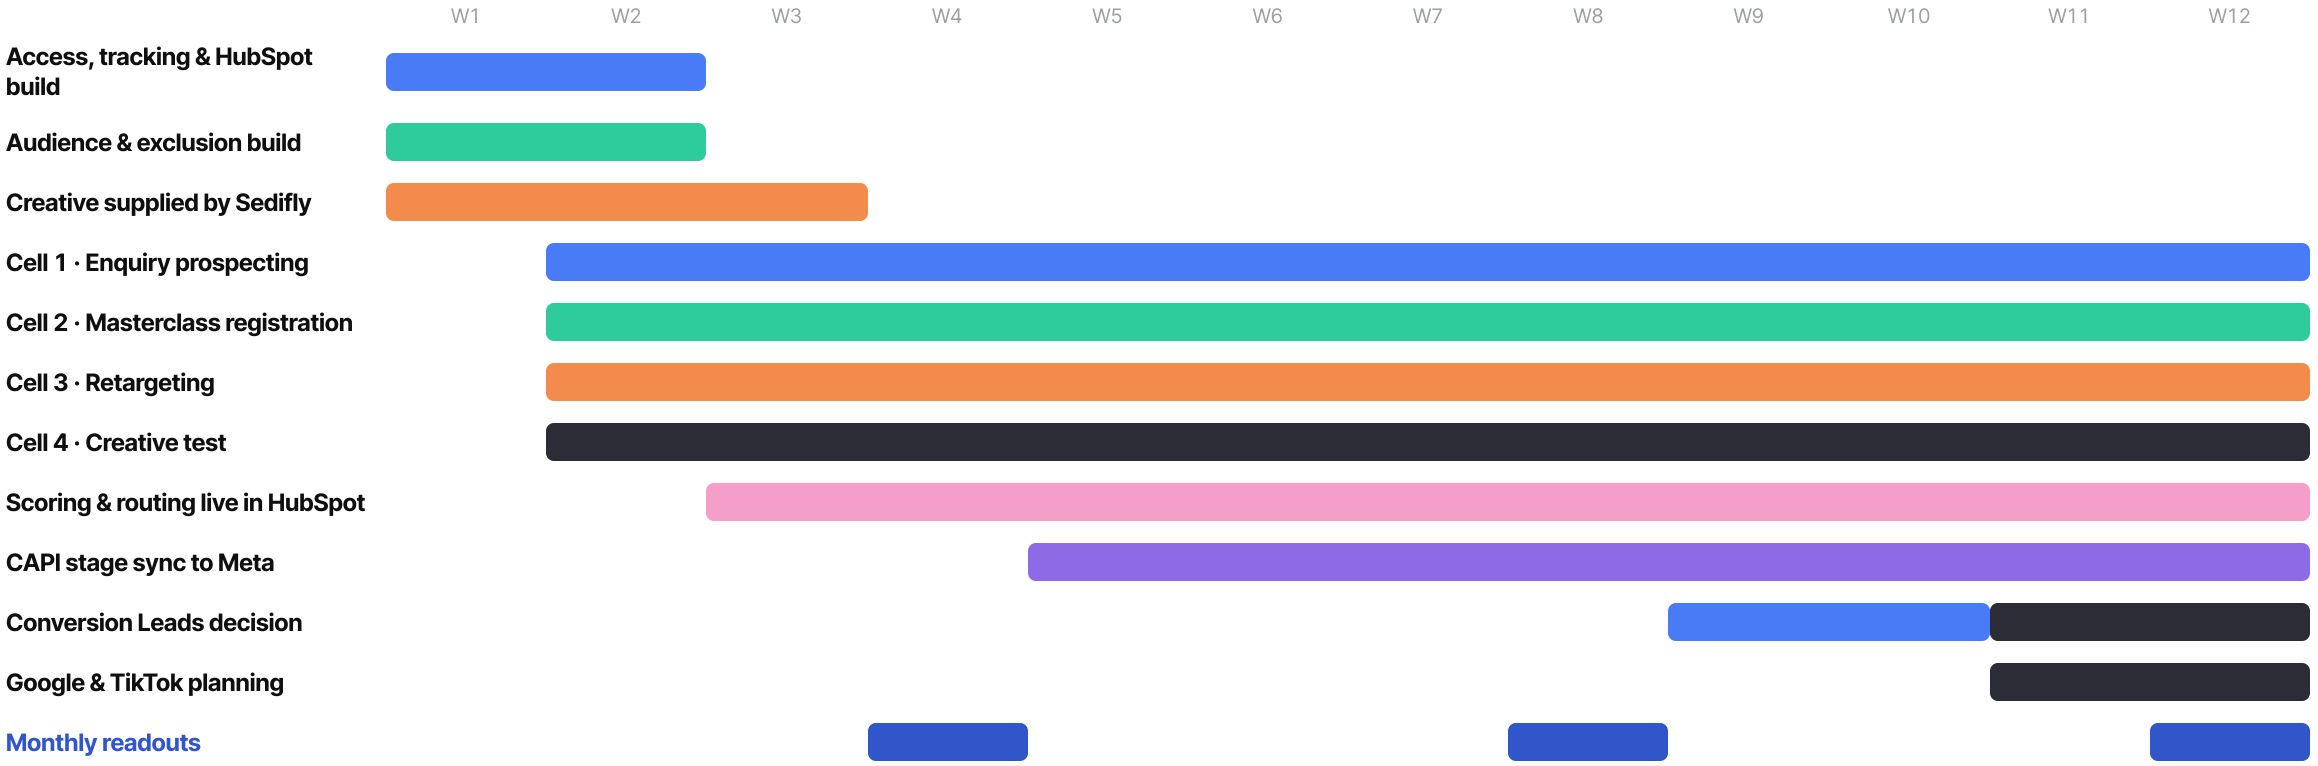

Always on

A shared dashboard from day one covering spend, enquiries, cost per enquiry and cost per qualified enquiry by cell. Nobody at Sedifly should have to email an agency to find out today's number.

THE FIRST 90 DAYS

Build, launch, learn, then decide on the switch

Weeks run from the day access is granted. All four cells launch together in week two. Week 9 is a decision point rather than a guaranteed switch, and the criteria are on slide 16.

Week 4 is the first honest read — before that, cost per enquiry is a learning-phase artefact. We will say so in week 2 rather than present a flattering number we know will move.

FLIGHTING

The admissions calendar sets the budget, not the accounting month

This category has dated urgency, and the creative that works in September is wrong in April. Below is how we would shape a S$3,000 monthly commitment across a year, and which tier each window sells.

Aug – Oct · Peak

The deadline window

Oxbridge, medicine, dentistry and veterinary close **15 October**. US Early Decision and Early Action close **1 November**. Intent is at its annual high and so is competitor spend.

- **Sells:** Focus
- **Angles:** A and E
- **Budget index:** 130%
- Accept a higher cost per enquiry here. These families are in-cycle and close fastest.

Nov – Jan · High

Regular Decision, then the pivot

US Regular Decision closes **early January** and UCAS equal consideration **late January**. At the same time JC1 and Sec 4 parents start planning the next cycle.

- **Sells:** Focus, then Build
- **Angles:** A and E, then B
- **Budget index:** 110%
- The one month both audiences are live. Run both tracks in parallel.

Feb – Apr · Proof

Results season

Offers land. This is the highest-trust content moment of Sedifly's year and the cheapest month to build a retargeting pool that will still be warm in September.

- **Sells:** Build and Shape
- **Angles:** D and B
- **Budget index:** 90%
- Capture every testimonial while the offer letter is still new.

May – Jul · Build

The long runway

Lowest CPMs of the year and the least competitor noise. Nobody is buying urgently, so audience-building is cheapest here.

- **Sells:** Shape
- **Angles:** B and D
- **Budget index:** 70%
- Weight toward masterclass registrations and pool growth over direct enquiries.

The index is relative to a flat S$3,000 — 130% is about S$3,900 in October against 70%, about S$2,100, in June, at the same annual outlay. If the monthly commitment has to stay flat we shift the mix instead and say so.

LATER PHASES · PROPOSED, NOT INCLUDED

Google from month four, TikTok from month four to six

Both sit outside this engagement and would be scoped and quoted on their own before anything launches. They are here because they are the right next moves and because the Meta build makes them cheaper to start.

Phase 2 · Google	Budget	Share	Cost per	Enquiries
Brand defence sedifly · sedifly review · joash lee	S$300	17%	S$15–30	10–20
Non-brand high intent us admissions consultant singapore · personal statement help · ucas application help	S$900	50%	S$80–120	7–11
Competitor conquest the large incumbent firms in Singapore	S$450	25%	S$100–150	3–4
YouTube retargeting founder story as a 30s in-stream	S$150	8%	assist	—
Monthly total, separately quoted	S$1,800	100%	—	20–35

Google enquiries cost roughly twice a Meta enquiry and qualify at 65 to 80% against Meta's 50 to 65%, because the searcher named the problem themselves. Conquest campaigns bid on competitor terms and never place a competitor's trademark in the copy. Performance Max stays out until 60 days of clean conversion data exist to feed it.

Phase 3 · TikTok	Budget	Cost per	Output
Spark Ads on organic Founder and strategist posts, boosted from the real account	S$600	CPM	audience
Instant Form, masterclass The same monthly session as Meta Cell 2	S$400	S$8–14	28–50 regs
Search Ads test	S$200	S$30–50	4–6
Monthly total, separately quoted	S$1,200	—	32–56

If both phases are commissioned

Channel	M1–3	M4–6	M7–12
Meta	S$3,000	S$3,000	S$4,000
Google	—	S$1,800	S$2,500
TikTok	—	S$1,200	S$1,500
Monthly media	S$3,000	S$6,000	S$8,000

At S$6,000 the blended forecast is **71 to 109 enquiries a month**: 47–68 from Meta, 20–35 from Google and 4–6 direct from TikTok, alongside 62–100 masterclass registrations across both platforms. TikTok also runs 18-plus only under its own minor protections, so it is pointed at masterclass registration rather than direct booking until it earns more.

RECOMMENDATIONS FOR SEDIFLY TO OWN

Eight things that would make the same S$3,000 work harder

None of these are media line items and several cost nothing but a decision. They sit outside this proposal's scope. Where Toggle would do the work it would be quoted separately.

1 · Publish the rate card

Nobody in this category publishes prices, and Sedifly's whole position is that pricing should be transparent. Publishing it makes the claim real, earns organic search and press, and does the budget qualification before the form for free.

2 · Gate one thing

The Insights library is strong and entirely open. Turn the best of it into one download, *The Singapore Applicant's Gap Report*, behind an email. It seeds retargeting and feeds nurture for a designer's day of work.

3 · Name the masterclass

The events are currently one-offs with different titles. One named series on a fixed monthly date means paid spend compounds against a single recognisable asset instead of restarting each time.

4 · Capture proof at offer time

150+ offers is 150+ testimonials nobody filmed. Build a 48-hour capture habit into delivery. A two-minute phone video while the offer is still new beats anything produced six months later.

5 · Use the press you have

Davos, The Economist, Forbes Business Council and CBS. That is credibility most challengers cannot buy and it appears nowhere in the ad experience. A "featured in" strip belongs on every landing page and in every cold creative.

6 · Own the non-traditional route

Polytechnic and ITE to Ivy League is a position no incumbent can copy, because none of them has the founder for it. Alumni networks, polytechnic talks and co-marketing turn that story into a distribution channel.

7 · Pay the referral engine

The */referral* and */refer-friends* pages already exist and are almost certainly the cheapest source of enrolments in the business. A structured incentive and a paid nudge to existing clients will beat any cold cell in this plan.

8 · Nurture for six months

A parent researching in March may not commit until September, and a seven-day email sequence throws that away. Build a six-month WhatsApp and email cadence keyed to the admissions calendar. The media budget already paid for those contacts.

Where we would start — items 3 and 5, because both cost Sedifly nothing and both raise conversion on ads that are already running. Item 1 is the biggest move on the list and needs a decision from Joash.

EDUCATION CASE RECEIPTS

Four numbers from a live education account

All four come from the same current Toggle engagement: a **private university group in Malaysia, ten campuses, Meta plus Google plus TikTok, seven-figure annual media**. Figures cover March to June 2026. The client is named on request, with their approval.

−37%

Cost per lead

On **126% more spend** and **263% more leads** than the prior period. Scaling budget and improving efficiency at the same time is the claim.

+68%

Leads on 36% less spend

Meta channel, month on month, with channel cost per lead improving 62%. The gain came from rebuilding the account structure while the budget fell.

+150%

Cost per lead without server-side tracking

Modelled on the same account: removing Meta CAPI costs 150% higher cost per lead and about 10% of leads. This is why week one is a measurement week.

0

Leads from one retargeting week

RM700 spent, nothing back, because the pool was saturated at that budget. Written off and reported. It is why Cell 3's allocation ladder is published in advance (slide 8).

One more figure from that account

Media plans there quoted platform costs per lead of RM70 to 175, while the true **cost per qualified lead ran five to eighteen times higher** once the client's own sales data came back. We know because we measured it and told them. That is why this proposal argues for cost per qualified enquiry throughout, prices a qualification stack into month one, and puts wide bands on slide 9 rather than a confident point estimate.

How to read these

- **Different market.** Malaysia, in ringgit, with materially lower CPMs than Singapore.
- **Different scale.** Seven-figure annual media against S$3,000 a month. Levers available there are not available here.
- **Different funnel.** High-volume undergraduate enquiry, not premium one-to-one admissions consulting.
- **Shown for method.** None of these percentages is a promise about Sedifly and we would not defend them as one.

SCOPE OF ENGAGEMENT

What this proposal covers, and what it does not

This slide sets the boundary of the work. **Fees, setup, payment terms, minimum term, renewal, notice and the fee threshold are all in the accompanying quotation**, which is the only document that carries a price.

Delivered under this proposal	What it covers
Strategy and build	Account architecture, four-cell campaign build, audience and exclusion structure, UTM framework
Daily management	Bid and budget management, cost ceilings, kill rules, the reallocation rule on slide 6
Qualification	The five steps on slides 13 and 14, Instant Form architecture, the A–D scoring model and routing rules
Measurement	Pixel and Conversions API build, GA4 and GTM, the HubSpot configuration on slide 15, and the week-nine Conversion Leads decision
Reporting	Weekly one-pager, monthly live readout, always-on shared dashboard (slide 17)
Compliance	Ad-policy rewrites, PDPA form language, platform liaison (slide 12)

Proposed but outside this scope

In the deck because they are the right next moves, not because they are included. Each would be scoped and quoted on its own.

- Google Ads execution, Phase 2 on slide 20
- TikTok execution, Phase 3 on slide 20
- LinkedIn testing
- The eight recommendations on slide 21, which are Sedifly's to own

Never bundled, never assumed

All creative production, direction and copywriting. Toggle briefs what each cell needs (slide 11) and decides what runs; Sedifly or its creative partner produces it. Also excluded: working media and any third-party licence or platform fee, including the HubSpot and WhatsApp costs on slide 15. Paid talent, usage rights, studio hire and crewed production. Translation and non-English versioning. Website design or Wix build work beyond the tracking install and the HubSpot form embed. Print and offline collateral.

Why there is no price on this slide — keeping scope and price in separate documents makes both easier to check, and stops scope growing between signature and invoice.

GETTING STARTED

What you are sending us, what we need, and what happens next

The four inputs you offered, and what each replaces

From Sedifly	What it replaces
Funnel stage definitions	Our five stages on slide 9, so we report in your language rather than ours
Historical stage conversion rates	Every band on slide 9. Category benchmarks become your actuals.
Median days-to-close, by tier	The whole lag model on slide 10, and the most useful of the four
Confirmed monthly media budget	Cell sizing on slide 5

Send those four and we re-issue the forecast against your own history within **three working days**, before any commitment either way.

Next steps

1 · This week
Thirty-minute call: walk the quotation, confirm the HubSpot tier, sign off the four claim rewrites.

2 · On your side
The four inputs above, and the HubSpot admin access.

3 · Days 1–5
Measurement layer and HubSpot build, then verification. Audiences and exclusions constructed.

4 · Day 6–9
All four cells live. First weekly one-pager the following Monday.

Access we need before launch

- **Meta Business Manager** — admin on the Business, ad account and Page.
- **HubSpot** — admin, to build the form, the lifecycle mapping and the Meta connection (slide 15).
- **Wix admin**, or marketing-integrations access, to install the Pixel and embed the HubSpot form.
- **WhatsApp Business API** on the published +65 8774 7605 number.
- **The creative assets each cell needs**, to the specification on slide 11, before launch and refreshed monthly.
- **The offer list** behind "150+ offers", to substantiate the claim rewrites on slide 12.
- **A named owner of the five-minute reply** on slide 14. It is the one commitment we cannot make on Sedifly's behalf.

Commercials are in the accompanying quotation, issued as a separate document with an acceptance block and valid 30 days from issue.
